

— EVE FRONTIER · STILLNESS

Bounty Board **Player Guide**

Put a price on a pilot. A hunter kills them, a hunter gets paid. This is how to post a bounty, how to collect one, and how to get your reward back if no one takes the shot.

Where	honeybadger.software/frontier/bounty/ · open it in Chrome or Edge
Network	EVE Frontier on Sui testnet, world Stillness
Reward in	SUI or EVE (testnet coins for now)
You need	an EVE Frontier account, the EVE Vault wallet, and a little testnet SUI for gas

00 What this is

The Bounty Board is one screen for **Stillness**, EVE Frontier's live game world on the Sui test network. The left side, **WANTED**, lists the pilots with a price on their head right now. The right side, **PUT A PRICE ON A PILOT**, is where you post a new one. Search a pilot by name, set a reward, set how long it runs, and lock it on the chain. Any hunter who kills that pilot can then claim the whole reward.

There is **no house cut**. The hunter gets every coin you put up. The board only holds back a little of your SUI so you always have gas for the transaction, and it hands the rest straight to whoever makes the kill.

19,370

pilots you can search by name

0%

house cut - the hunter gets it all

14 days

longest a bounty can run

The whole board: WANTED on the left, post a price on the right.

1

— STEP 1

Get the EVE Vault wallet

The board talks to the chain through EVE Vault, the official EVE Frontier wallet. It is a browser extension you load once. Do this in the same browser you will open the board in.

Chrome

1. Go to github.com/evefrontier/evevault and open the latest **Release**. Download the zip and unzip it to a folder you will keep.
2. Open `chrome://extensions`.
3. Turn on **Developer mode**.
4. Click **Load unpacked** and pick the folder you unzipped.
5. Sign in to **Stillness** with your EVE Frontier login.

Edge

1. Get and unzip the same release from github.com/evefrontier/evevault.

2. Open **Extensions > Manage extensions**.
3. Turn on **Developer mode**.
4. Click **Load unpacked** and pick the unzipped folder.
5. Sign in to **Stillness** with your EVE Frontier login.

ONLY EVER LOAD IT FROM THE OFFICIAL SOURCE

EVE Vault is in beta and not in the Chrome or Edge store yet, which is why you load it by hand. Get it only from github.com/evefrontier/evevault - that is the one official source. Loading a wallet from anywhere else is how people get their coins drained.

CHROME OR EDGE, YOUR PICK

EVE Vault works in both. Load it in the browser you open the board in. Already set it up in Chrome but opened the board in Edge? Click GET EVE VAULT: the board copies its own link so you can paste it into Chrome.

GET FREE TESTNET SUI FIRST

Your wallet starts empty, and every post, collect or take-back costs a little SUI for gas. Get some free at faucet.sui.io: choose testnet, paste your wallet address (copy it from the top of EVE Vault), and request. Do this before you post.

2

— STEP 2

Connect

With EVE Vault loaded, open the board and connect. This is read-only until you sign something - connecting just lets the board see your pilot and your coins.

1. Open honeybadger.software/frontier/bounty/.
2. Top left of the board reads **CONNECT EVE VAULT**. Click it and approve in the popup.
3. The top bar now shows your **pilot name**, your **character id**, and your **SUI** (and EVE, if you hold any). That means you are in.

NO WALLET DETECTED?

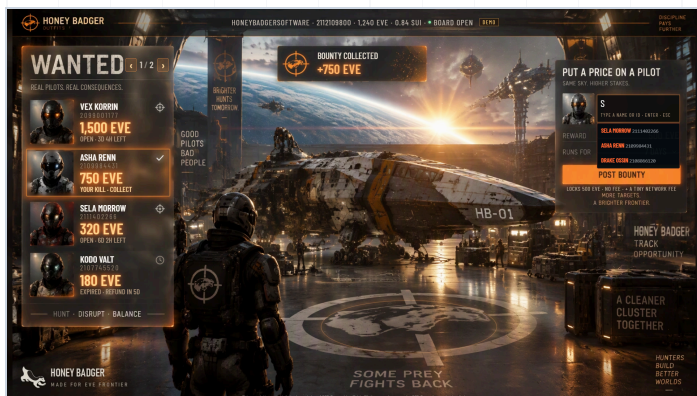

If the button says GET EVE VAULT instead of CONNECT, the extension is not loaded in this browser. Go back to Step 1, then reload the page.

- STEP 3

3

Post a bounty

Pick a pilot, name your price, choose how long it runs, and sign. The reward is locked on the chain the moment you sign - it leaves your wallet until someone collects it or you take it back.

Set the reward, then how many days it runs.

- Pick the pilot.** Click CHOOSE A PILOT and start typing a name. The board searches every pilot in Stillness and shows matches under the box. Pick the one you mean - it locks the exact character, not just the name.
- Set the reward.** Type the amount. The board pays in **EVE** if your wallet holds any, otherwise in **SUI** - the coin shows next to the amount. Whatever you put up is what the hunter collects.
- Set the run time.** Choose the days, up to **14**.
- Post it.** Click POST BOUNTY and approve in EVE Vault. It shows up in the WANTED list for every hunter to see.

WHAT YOU SET	WHAT IT MEANS
Pilot	The exact character the bounty is on. You cannot post one on yourself.
Reward	The amount you type, in EVE if you hold any, otherwise SUI. The hunter gets the full amount; there is no fee to the board.
Days	How long it stays open for a kill. Up to 14 days.
Fee reserve	When you post in SUI, the board leaves 0.05 SUI in your wallet instead of locking it, so you always have gas. It is not a charge and not locked - only the reward you set is locked, and take back returns that.

4

- STEP 4

After a kill: collect

When a hunter kills the pilot you posted, the game writes a killmail to the chain. That killmail is the proof. The hunter brings it to the board and collects the reward.

If you posted the bounty, you do nothing. The kill and its killmail unlock the reward, and the board pays the hunter straight from the funds you locked. No approval needed from you.

If you are the hunter, this is your side:

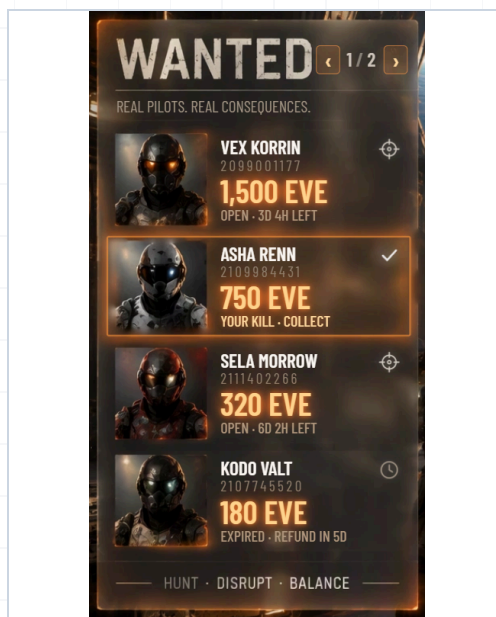

1. Kill the pilot who has the bounty, in game. The killmail is written to the chain for you.
2. Open the board and give it a moment - it re-checks the chain every 30 seconds, so the card updates on its own. The pilot's card in **WANTED** flips to **YOUR KILL · COLLECT**.
3. Click **COLLECT** and approve in EVE Vault. The full reward lands in your wallet.

IF COLLECT ISN'T SHOWING YET

A killmail has to reach the chain before the board can see it, which is not always instant. If your kill is not on the card yet, wait a moment for the board's 30-second refresh, or reload the page.

THE BOARD CHECKS THE KILL, NOT YOUR WORD

Collect only works when the chain already has a killmail that names you as the killer of that exact pilot. No killmail, no collect. Nobody can talk their way into your reward.

A WANTED card flips to YOUR KILL - COLLECT for the pilot who made the kill.

5

- STEP 5

Take back a reward

If a bounty runs its full time and nobody kills the pilot, the reward is not gone. You can take it back - after a short wait that leaves room for a late killmail.

- Your bounty is open for a kill for the days you set, up to 14. When that time is up, it expires.
- **Take back opens 7 days after it expires** - so the full wait is the days you chose, then 7 more. Until then the TAKE BACK button stays inactive. That week is a grace window: a kill made right at the end can land its killmail a little late, and the hunter still deserves the pay.
- Once that week is up, open the board, find your bounty, and click **TAKE BACK**. Approve in EVE Vault and your reward returns to your wallet.

WHY THE WAIT

The 7-day window protects the hunter. If take-back were instant at expiry, a poster could yank the reward out from under a kill that just happened. The wait makes the board fair to both sides.

06 The rules, in one place

RULE	WHAT IT MEANS FOR YOU
No house cut	The hunter collects the entire reward. The board takes nothing.
No self-bounty	You cannot post a bounty on your own pilot.
Target can't claim	The pilot with the price on them cannot collect their own bounty.
Kill is proof	Collecting needs a real on-chain killmail naming the hunter as the killer.
Up to 14 days	That is the longest a bounty can be set to run.
Take back after +7 days	If no one collects, you get your reward back 7 days after expiry.
Gas stays yours	Posting in SUI leaves ~0.05 SUI in your wallet for gas instead of locking it - not a charge. Every action is a signed transaction that costs a little SUI.

THIS IS TESTNET

EVE Frontier runs on Sui testnet today. The SUI and EVE the board handles are testnet coins for play, not real money. Post, hunt and collect freely - just know the coins are not cash yet.

07 Quick answers

THE BOARD SAYS GET EVE VAULT AND WON'T LET ME CONNECT.

The wallet extension is not loaded in this browser. Do Step 1, then reload the page.

I TYPED A PILOT'S NAME AND NOTHING HAPPENED.

Type at least the first few letters and wait a beat for the matches to appear under the box, then click the one you want. If nothing matches, check the spelling - the board only knows pilots that exist in Stillness.

THE BUTTON SAYS CONNECT EVE VAULT TO POST.

You are not connected. Click it and approve in EVE Vault. If it says GET EVE VAULT TO POST, do Step 1 first.

IT SAYS "THAT IS YOUR OWN CHARACTER".

You cannot put a bounty on yourself - the chain refuses it. Pick another pilot.

IT SAYS "POST UP TO" AN AMOUNT OF SUI.

Your reward plus the 0.05 SUI gas reserve is more than you hold. Lower the reward to the amount it shows, or get more testnet SUI from faucet.sui.io.

IT SAYS "CHOOSE A PILOT FIRST".

Click CHOOSE A PILOT, type part of a name, and pick the pilot from the list under the box.

CAN I ADD TO A BOUNTY SOMEONE ELSE POSTED?

Tap that pilot's WANTED card to load them into the post panel, then post your own reward on the same pilot. Rewards stack the pressure on the same target.

SOMEONE KILLED MY TARGET. WHEN DO THEY GET PAID?

As soon as the killmail is on the chain, their card shows COLLECT and they can claim it. You do not need to approve anything.

NOBODY KILLED MY TARGET AND IT EXPIRED. IS MY REWARD GONE?

No. Wait until 7 days after it expired, then click TAKE BACK and it returns to your wallet.
